

DAILY USE GUIDE

TourClicks

Punches, timeline, calculators, leave, FMLA, reports, and backup

Record the day. Review the result. Protect the record.

Purpose: Use this guide after initial setup. Follow one worked example from Begin Tour through reporting and backup.

Prepared from TourClicks 1.0.0 interface and project documentation

Guide date: August 2026

START HERE

How to use this guide

Use the chapters in order for your first complete day. Later, use each chapter as a quick reference for one screen.

After a change, wait for Saved locally before closing the app. Local means the active app or browser storage, not automatic cloud sync.

Figure 1. Daily workflow: review, punch, calculate, document, compare, and back up.

Screen map

Screen	Use it for
Today	Date, schedule, BT, OL, IL, ET, daily totals, premium estimates, and timers
Calendar	Pay-period context, holidays, dates with work, leave, FMLA, notes, or attachments
Timeline	Timestamped facts, instructions, equipment or safety notes, images, and day export
Calculator	USPS hundredths conversion and late, lunch, or makeup scenarios
Leave/FMLA	Multi-date leave, FMLA cases, holiday records, and balance projections
Reports	Range summary, daily details, CSV, PDF, OCR comparison, and saved review history
Settings	Full backup, restore, and occasional configuration changes

PART 1**Today: record the workday****Before Begin Tour**

1. Open Today and confirm the Date field.
2. Read the PP-WK label and 14-day pay-period range.
3. Expand Schedule and day status.
4. Confirm Scheduled workday, Nonscheduled day, Training schedule, or Changed schedule.
5. If the date differs from the regular template, edit that date. Do not change the weekly template for a one-day exception.
6. Return to the punch panels and check that BT is the first missing punch.

Status	Use it when	Calculation effect
Scheduled workday	Normal assignment	First 8 worked hours estimate as straight time
Nonscheduled day	Regular day off	First 8 worked hours estimate as overtime
Training schedule	Training changed the day's schedule	Uses scheduled-day daily estimates
Changed schedule	Temporary approved schedule change	Uses scheduled-day daily estimates

Existing dates: A later change to the weekly template does not silently rewrite an existing daily record. Choose Use weekly schedule on that date if you intend to refresh it.

Enter BT, OL, IL, and ET

Figure 2. A completed punch advances to the next missing punch.

Code	Meaning	Record it when
BT	Begin Tour	Work begins
OL	Out Lunch	Lunch begins
IL	In Lunch	Work resumes after lunch
ET	End Tour	Work ends

1. Open the punch panel.
2. Type a regular clock value, type a USPS hundredths value, or select Stamp now.
3. Press Enter, Go, or Done after a direct entry when needed.
4. Confirm that the panel summary shows both regular clock and USPS formats.
5. Continue to the next missing punch.

Accepted time formats

Input type	Examples	How TourClicks reads it
Clock with AM/PM	5:27 AM, 1:30 PM	12-hour clock
24-hour clock	05:27, 13:30	AM or PM is not needed
Clock with seconds	05:27:00	Keeps second-level precision
Compact clock	0527	Reads as 05:27
USPS hundredths	05.27, 11.77, 13.44	Decimal portion is a fraction of an hour

USPS hundredths reference

Hundredths	Minutes	Seconds
0.01	0.6	36
0.10	6	360
0.25	15	900
0.50	30	1,800
0.75	45	2,700
1.00	60	3,600

Common mistake: 05.27 does not mean 5:27 AM. It means 5 hours plus 27 hundredths, which equals 5:16:12 AM.

Worked daily example

Figure 3. Fictional scheduled-day example.

Punch	USPS	Regular clock
BT	04.90	4:54:00 AM
OL	11.77	11:46:12 AM
IL	12.17	12:10:12 PM
ET	13.44	1:26:24 PM

TourClicks removes the 24-minute lunch interval. Worked time is 8 hours, 8 minutes, 24 seconds. Begin Tour is 6 minutes early. Daily estimates are 8.00 straight hours, about 0.14 overtime hour, 0.00 penalty overtime, and 1.10 night-differential hours.

Read every Today result

Result	What it means	What to check
Worked	BT-to-ET time minus a complete OL-to-IL lunch	Both lunch punches when lunch occurred
Lunch	Elapsed time from OL to IL	Missing or reversed lunch punches
Start variance	Actual BT compared with scheduled BT	Correct date-specific schedule
Straight time	Daily straight-time estimate	Day status and worked duration
Overtime	Daily overtime estimate	Scheduled versus nonscheduled day
Penalty OT	Eligible daily time beyond the threshold	Exclusion dates and eligibility
Night differential	Worked time from midnight-6 AM and 6 PM-midnight	Lunch is excluded

Missing lunch pair: If OL and IL are not both present, TourClicks treats BT through ET as one continuous interval. Complete both punches when lunch occurred.

Scheduled and nonscheduled premium estimates

Day type	Straight	Overtime	Penalty OT
Scheduled, training, or changed	First 8 hours	Hours over 8 through 10	Eligible hours over 10
Nonscheduled	0	First 8 worked hours	Eligible hours over 8

Manual premium override

Turn on Manually override calculated premium hours only when you have a known value that the punch-only estimate cannot represent. Enter overtime, penalty overtime, and night hours. Add a Timeline note explaining the source or instruction.

- ☐ I confirmed the date and day status.
- ☐ I checked all four punches and lunch.
- ☐ I have a clear reason for the override.
- ☐ I added a note that explains the source of the value.
- ☐ I compared the result with the official record when available.

Live timers

- Tour timer and Lunch timer run independently.
- Start, Stop, and Reset affect only the timer.
- Timers never write BT, OL, IL, or ET.
- Browser timers catch up from saved timestamps when the page returns.
- Android can provide persistent timer notifications when permission is allowed.

Timer use: Use a timer as a reminder or personal reference. Record each required punch separately.

PART 2

Timeline and Calendar

Add a timestamped timeline entry

TourClicks Timeline > Add timeline entry

Record facts while details are fresh.

Add timeline entry

Entry time: 5:12 AM

Entry type: Equipment issue

Note: Conveyor 3 stopped at 5:08 AM. Display showed E17. Notified supervisor at 5:10 AM. Photo attached.

Choose images

Add timestamped entry

Write these facts

- What happened
- Exact location
- Time observed
- Who was notified
- Equipment ID
- Follow-up action

Figure 4. A factual note records what happened, when, where, and who was notified.

1. Open Timeline and confirm the selected date.
2. Set Entry time to the time connected with the event.
3. Choose Work note, Instruction received, Equipment issue, Safety observation, Leave request, Schedule change, or Other.
4. Write observable facts and identify any follow-up.
5. Attach JPG, PNG, WebP, or GIF images when useful.
6. Select Add timestamped entry and wait for Saved locally.

Two timestamps: Entry time describes when the event occurred. Creation time records when the entry was saved.

Write useful documentation

Include	Example
Event	Conveyor stopped during startup
Time	Observed at 5:08 AM
Location or equipment	Conveyor 3, display E17
Notification	Supervisor notified at 5:10 AM
Action	Unit isolated and maintenance contacted
Evidence	Two photos attached

Images and daily export

- TourClicks compresses stored images and limits the longest side to about 1600 pixels.
- HEIC and HEIF are not supported by the current browser image workflow.
- Tap an attachment to view, fit, save, or share it where supported.
- Export day creates a date-specific JSON with that daily record, timeline entries, and leave entries.
- Export day is not a complete-app restore backup.

Use Calendar for review

Calendar groups dates by USPS-style pay periods and gives a quick view of work, late starts, leave, FMLA, notes, attachments, holidays, paydays, and nonscheduled days.

Calendar mark	Meaning
Green dot	Worked record
Red dot	Late start
Blue dot	Leave
Purple dot	FMLA or renewal date
Gray-blue dot	Timeline note or attachment
NS	Regular nonscheduled day
Diagonal shading	Unavailable or on vacation
PP badge	First Saturday of a pay period
PAY	Calculated payday

1. Open Calendar and move to the needed month.
2. Select a marked date.
3. Review punches, totals, leave, holiday information, and note count in the date dialog.
4. Select Open daily record to return to Today for that date.

PART 3

Calculator

TourClicks Calculator

Conversions and personal makeup arithmetic do not edit a saved timecard.

Time conversion

USPS time

05.31

Result

5:18:36 AM

1 hundredth = 36 seconds

Maximum rounding difference: 18 seconds

Late, lunch, and makeup

Scheduled BT	5:00 AM
Actual BT	5:06 AM
Normal lunch	30 min
Actual lunch	24 min
Start variance	6 min late
Recovered at lunch	6 min
Makeup balance	0 min
Personal offset ET	1:30 PM

Figure 5. Calculator results are separate from saved timecards.

Convert USPS time

1. Open Calculator.
2. Enter a value such as 05.31 under USPS hundredths to regular clock time.
3. Read the result, 5:18:36 AM.
4. For the reverse conversion, enter a clock time such as 5:18:36 AM.
5. Read the nearest USPS hundredth. Maximum rounding difference is 18 seconds.

Use a saved day as a calculator starting point

1. Choose a source Date or keep the shared selected date.
2. Select Use selected day.
3. Choose Regular clock time or USPS hundredths as the input format.
4. Edit Scheduled BT, Actual BT, Scheduled ET, normal lunch, OL, or IL for the scenario.
5. Read Start variance, Lunch used, Recovered at lunch, Makeup balance, Standard ET, Personal offset ET, and Adjusted USPS punch.
6. Return to Today if you need to edit the real daily record. Calculator changes do not do that.

Makeup example

Input	Value
Scheduled BT	5:00 AM
Actual BT	5:06 AM
Scheduled ET	1:30 PM
Normal lunch	30 minutes
OL	11:46 AM
IL	12:10 PM

Result	Value
Start variance	6 minutes late
Lunch used	24 minutes
Recovered at lunch	6 minutes
Makeup balance	0 minutes
Standard ET	1:30 PM
Personal offset ET	1:30 PM

Interpretation: Personal offset ET is arithmetic for planning. Schedule changes, short lunches, makeup arrangements, and alternate end times require the applicable approval or instruction.

PART 4

Leave and FMLA

Create an FMLA case first when needed

1. Open Leave/FMLA and find FMLA case and renewal alert.
2. Enter a neutral Case label.
3. Choose Own condition or Dependent care.
4. Enter expiration and renewal-warning days from the official case information.
5. Enter the reference number only when useful.
6. Record approved frequency or case details without unnecessary medical information.
7. Select Save FMLA case.

Case field	Example
Case label	Own condition - Case A
Category	Own condition
Expiration	12/31/2026
Renewal warning	30 days
Frequency details	Up to 2 episodes per month, up to 8 hours each

FMLA alert: A saved case can show a warning on Today when it enters the configured renewal period or expires.

Enter multi-date leave

TourClicks Leave/FMLA

Keep reason, protection, charge, and case linkage as separate facts.

Start date 08/17/2026	End date 08/21/2026	Hours per workday 8	Reason Own illness
Protection FMLA - own condition	Charge hours to Sick leave	Linked FMLA case Own condition - Case A	

Build date preview **Save previewed dates**

Preview check
Scheduled days: 8 h
NS days: 0 h

Figure 6. Reason, protection, charge, and linked case describe different parts of the absence.

1. Choose Start date and End date.
2. Enter Default hours per scheduled day.
3. Choose Reason.
4. Choose Protection or designation.
5. Choose Charge hours to.
6. Link the saved FMLA case when FMLA protection is selected.
7. Review or edit the suggested pay or timekeeping code.
8. Choose whether nonscheduled days should be marked unavailable with zero leave hours.
9. Add a short note or approval reference.
10. Select Build date preview.

Review the date preview before saving

Preview item	What to verify
Date and weekday	Every intended date is present
Scheduled status	Regular schedule or date-specific change is correct
Scheduled hours	Expected work hours for that date
Leave hours	Full or partial amount is correct
Unavailable	Nonscheduled dates are marked only when intended

For a scheduled date, TourClicks suggests the smaller of the default requested hours or the scheduled hours remaining after recorded work. If four hours were already worked on an eight-hour day, the preview can suggest four leave hours.

1. Edit any partial-day leave hours.
2. Keep nonscheduled leave hours at zero.
3. Confirm the unavailable checkboxes.
4. Select Save previewed dates.
5. Review Annual Leave and Sick Leave current and projected balances.
6. Open Calendar to confirm leave, FMLA, and unavailable indicators.

Negative estimate: If the request projects annual or sick leave below zero, TourClicks asks before saving. A red value is a local projection, not an approval decision.

Reason, protection, and charge examples

Situation	Reason	Protection	Charge
Vacation	Vacation or personal	None	Annual leave
Own illness with FMLA	Own illness or medical	FMLA - own condition	Sick leave, AL, or LWOP as applicable
Dependent care with FMLA	Dependent care	FMLA - dependent care	SL, AL, or LWOP as applicable
Dependent care without FMLA	Dependent care	Dependent care - non-FMLA	Applicable leave category
Unavailable only	Applicable reason	Applicable designation	No leave hours - unavailable only

Common suggested codes

Charge	Suggested editable code
Annual leave	055
Sick leave	056
LWOP	060
Union official - LWOP	060
Holiday leave	058
Administrative leave	086

Holiday record

Use the same screen to record the actual holiday date, confirmed designated holiday, whether it was worked, annual-leave-in-lieu election, credit, code, assignment status, notification times, and factual evidence.

PART 5

Reports and comparison

TourClicks Reports

Choose range and privacy before building, printing, or sharing.

Report privacy: Union/steward - masked EIN

From: 08/08/2026

To: 08/21/2026

Build report **Print / PDF** **Export CSV**

Work: 80:00 Late: 6 min OT: 2.14 POT: 0.00 Night: 5.50

Build report again after changing date range or privacy.

Figure 7. Choose privacy and date range before building a report.

Build a report

1. Open Reports.
2. Choose Private - full profile, Union/steward - masked EIN, or Shareable - omit EIN.
3. Select From and To dates.
4. Choose Build report.
5. Review employee header, summary totals, daily records, and missing punches.
6. Choose Print / PDF or Export CSV only after reviewing privacy and range.

Privacy mode	EIN behavior	Typical use
Private	Full EIN when saved	Personal full record
Union/steward	Masked, final four visible when available	Review with a representative
Shareable	Omitted	Broader sharing or tutorial examples

Read report output

Section	Contents
Employee and installation	Profile fields allowed by the privacy mode and regular schedule
Summary	Work, late, overtime, penalty overtime, night, leave, notes, and record count
Daily details	Date, PP-WK, punches, worked duration, late minutes, and premiums
CSV	One row for every calendar date in the selected range
Print / PDF	Rendered report for printing or saving

Restoration: CSV and PDF are report outputs. They cannot restore app state. Use Export backup in Settings for restoration.

Quick pay-period review

- [] Date range covers the complete pay period.
- [] Every worked date has expected punches.
- [] Missing OL or IL is intentional or corrected.
- [] Late, OT, penalty OT, and night totals were reviewed.
- [] Leave totals match the intended dates and hours.
- [] Privacy mode fits the recipient.

Compare a screenshot

1. Choose Virtual Timecard or ePayroll.
2. Choose the comparison date.
3. Select a JPG, PNG, or WebP screenshot.
4. Crop with Left, Top, Right, and Bottom percentages. Rotate if needed.
5. On Android, use Automatic OCR. On Web, paste recognized text manually.
6. Read and correct the recognized text.
7. Select Extract values from reviewed text.
8. Correct Date, BT, OL, IL, ET, regular, OT, penalty, night, and leave fields as needed.
9. Select Compare with TourClicks.
10. Investigate each match, small clock variance, difference, or missing OCR value.
11. Save the reviewed comparison if it should remain in history and Timeline.

Comparison state	Meaning
Match	Values agree within the app's comparison tolerance
Small clock variance	Punch difference is 90 seconds or less
Difference	Values differ beyond the tolerance
OCR value missing	No reviewed external value is available

No overwrite: Saving a reviewed comparison does not change punches, premium hours, or leave entries.

PART 6

Backup, restore, and transfer

Figure 8. A backup is complete only after it is stored separately and can be verified.

Export a complete backup

1. Wait for Saved locally.
2. Open Settings and expand Data and backup.
3. Choose Export backup.
4. Save the tourclicks-backup-date.json file in a location separate from the app.
5. Keep at least one older known-good export before replacing it.

File or output	Contains	Can restore full app
Full backup JSON	Settings, daily records, Timeline, leave, FMLA, holidays, timers, comparisons, and stored images	Yes
Export day JSON	One date's daily record, Timeline, and leave	No
Report CSV	Tabular date-range report	No
Printed PDF	Rendered report	No

Restore or move to another device

1. Open or install TourClicks on the destination device or browser.
2. Open Settings, then Data and backup.
3. Choose Import backup and select the trusted JSON file.
4. After import, review several known dates in Today and Calendar.
5. Review Timeline images, leave entries, FMLA cases, report settings, and weekly schedule.
6. Export a new backup from the destination after verification.

Import effect: Import replaces the active local app state with the imported state, then fills newer default fields where needed. Export the current state before importing.

Backup schedule

When	Action
After each important day	Export if notes, images, leave, or corrected punches would be hard to recreate
At each pay-period review	Export after report comparison and corrections
Before import or update	Keep a fresh backup and an older known-good copy
Before changing device or browser	Export and copy the file to the destination
After successful restore	Create a new destination backup

PART 7

Daily checklist

Before work

- ☐ Correct date
- ☐ Correct PP-WK
- ☐ Correct schedule and day status
- ☐ BT panel ready

During work

- ☐ BT entered
- ☐ OL entered
- ☐ IL entered
- ☐ Timeline facts or images added when useful

At End Tour

- ☐ ET entered
- ☐ Worked time reviewed
- ☐ Lunch reviewed
- ☐ Start variance reviewed
- ☐ Straight, OT, penalty OT, and night reviewed
- ☐ Any override explained in Timeline
- ☐ Saved locally displayed

After official records post

- ☐ Report range built
- ☐ Privacy checked
- ☐ Important dates compared
- ☐ Differences investigated
- ☐ Backup exported

Troubleshooting

Problem	Likely cause	Action
Worked time includes lunch	OL or IL is missing	Enter both lunch punches
05.27 displays 5:16:12	USPS value was read as clock minutes	Use 05:27 for clock time or accept the hundredths conversion
Wrong overtime pattern	Day status is wrong	Review Scheduled versus Nonscheduled
Schedule changed on one date	Date-specific record differs from template	Use weekly schedule only if you want to reset that date
Calculator result did not change Today	Calculator is isolated	Edit the actual date in Today
FMLA leave will not save	No linked case	Create and select the required FMLA case
Leave preview is lower than expected	Worked hours reduce remaining scheduled hours	Review that day's punches and partial-day amount
OCR button disabled on Web	Automatic OCR is Android-only	Paste recognized text manually, then extract and review
PDF or CSV will not restore	Report output is not a backup	Import a full backup JSON
Records missing on another browser	No automatic sync	Export from the source and import on the destination

Scope

TourClicks is independent Ausuba3D software. It supports personal recordkeeping and comparison. It does not connect to LiteBlue, submit leave or FMLA, replace official records, or determine final pay or contractual entitlement.
